

## alignates

Alignati non polverisi per imprente.

**INDICAZIONI D'USO**
Lampia gamma di alignati Zeta 7 stata sviluppata per rispondere a tutte le esigenze della pratica clinica.
**Hydrogum**: alignato ad elevata consistenza per modelli studio. Aroma: Menta
**Hydrogum soft**: alignato a consistenza cremosa, non comprime i tessuti, particolarmente indicato per imprente preliminari di macelari edentali. Aroma: Menta
**Orthoprint**: alignato extra elastico a presa rapida, indicato per la pratica generale. Le eccezionali proprietà elastiche lo rendono indicato per l'impreso in ortodonzia. Aroma: Vaniglia.

**Neocollid**: alignato per imprente di alta precisione con tempo di presa normale. Aroma: Cioccolta.
**Phase plus**: alignato cromatico a consistenza cremosa. La variazione cromatica accompagna le diverse fasi di preparazione: viola durante la miscelazione, rosa durante la fase di lavoro e posizionamento sul portamontagna, bianco durante il tempo di permanenza nel cavo orale fino l'indurimento. Indicato nella pratica clinica generale per la creazione di modelli studio. Aroma: Menta

**Topicalgim**: alignato cromatico ad elevata consistenza. La variazione cromatica accompagna le diverse fasi di preparazione: rosso durante la miscelazione, arancione durante la fase di lavoro e posizionamento sul portamontagna, giallo durante il tempo di permanenza nel cavo orale fino l'indurimento. Indicato nella pratica clinica generale. Il cambiamento cromatico associato ad un aroma gradevole lo rendono particolarmente adatto all'ufficio in pedodonzia. Aroma: Mango

**DOSAGGIO E MISCELAZIONE**

Aprire la busta (Fig. 1) e versare l'alignato in un contenitore a chiusura ermetica (Fig. 2). Si consiglia conservare il numero di litro e data di scadenza del prodotto, ritagliando il dadi dalla busta. Agitare 2 o 3 volte per favorire la dispersione della polvere (Fig. 3) e procedere con il dosaggio: con l'aiuto del cucchiaio dosatore prelevare l'alignato senza comprimere la polvere, invece o togliere gli eccessi di alignato passando la parte piatta della spatola sul cucchiaio (Fig. 4) e versarlo in una tazzina di gomma. Ripetere l'operazione di volta aggiungendo la quantità desiderata.

Per ogni cucchiaio di polvere (9 g), versare 1/2 di misurino d'acqua (18 ml). Es. per 2 misure di polvere (18 g) sufficiente per un cucchiaio metallo superiore, versare 2/3 di misurino d'acqua (36 ml) (Fig. 5).

Aggiungere l'acqua alla polvere per iniziare la miscelazione secondo i tempi consigliati nella tabella (Fig. 6), posizionare il materiale sul portamontagna (Fig. 7) e inserirlo nella cavità orale prima della fine del tempo di lavorazione (Fig. 8).

Attendere l'indurimento del materiale osservando i tempi consigliati per la permanenza nel cavo orale. Negli alignati cronici, i tempi di lavorazione sono facilmente riconoscibili da cambiamenti di colore, descritti in precedenza.

Per una miscelazione ottimale (omogenea e senza bolle d'aria) si consiglia l'uso di ALGHAMIX II (Fig. 9).

**TEMPI DI UTILIZZO CLINICO\* (TIMES FOR CLINICAL USE\*)**

I tempi di utilizzo clinico sono riportati nella **Tabella 1**
**Riga I:** Tempo di miscelazione (Mixing Time)
**Riga II:** Tempo di lavoro (Working Time)
**Riga III:** Tempo di permanenza in bocca (Time in Mouth)
**Riga IV:** Tempo di presa (Setting Time)
**Riga V:** Tempo totale di lavorazione (Total working time - ISO 1563)

\*Times for clinical use (see table 1, Material Characteristics) are indexed to the start of mixing with deionized water at 23/23°F. Cold water retards setting, warmer water speeds up setting. Variations in water hardness may result in variations in times. According to ADA 18-1563 specifications.

**WARNING:** In some subjects, vinyl polysiloxane may cause irritation or other allergic reactions.

**CLEANING AND DISINFECTION OF THE IMPRESSION**

When taking the impression, carefully rinse in order to remove any traces of saliva (Fig. 10), drain off the excess water and dry immediately. Ideal disinfection is achieved by immersing the impression in Zeta 7 solution or spraying it with Zeta 7 spray (Zhermack) (Fig. 11). When using other disinfectants, always follow the manufacturer's instructions.

**POURING THE IMPRESSION – RECOMMENDED DENTAL STONES**

We recommend that you pour the impression immediately using dental stones type 3 (Elite Model/Model Fast - Zhermack) or type 4 (Elite Rock - Zhermack) (Fig. 13).

**STORING THE IMPRESSION**

If the gypsum cannot be immediately pour, drain off the excess water and store the impression in a hermetically sealed bag (Zhermack Long Life Bag) at room temperature (23/23°F). Under these conditions the gypsum pouring can be deferred for up to 48 hr after the impression taking (Fig. 14).

**CONSERVAZIONE DELL'IMPRESSIONE**

Qualora non fosse possibile colare il gesso immediatamente, eliminare gli eccessi d'acqua e conservare l'impronta in una busta ermeticamente sigillata (Long Life Bag Zhermack) a temperatura ambiente (23/23°F). In queste condizioni la colata del gesso può essere differita fino a 48 ore dalla presa d'impronta (Fig. 14).

**IMPORTANT REMARKS:** Conserving errors on the use of our products, provided in any form, be that verbal, written or through demonstrations, are based upon the current state of dentistry and of our know-how. They are to be considered as non-binding information, also in relation to possible third party claims, and do not exonerate the user from personally checking the conformity of the products with the applicable regulations. The user is responsible for the possible compliance with the Company and therefore under the user's responsibility. Possible liability for damages is limited to the value of goods supplied by the Company and therefore under the user's responsibility. Use eventually responsible liability of damages is limited to the value of the merchandise furnished by the firm and employed by the customer. The product content does not constitute a warranty against the risk of fire.

## alignates

Dust-free alignates for impressions.

**INDICAZIONI D'USO**
La vasta gamma di alignates Zhermack è stata sviluppata per rispondere a tutte le esigenze della pratica clinica.
**Hydrogum**: alignato ad elevata consistenza alignato for study models. Flavour: Mint.
**Hydrogum soft**: creamy consistency alignate, does not compress tissue, especially suitable for preliminary edentulous jaw impressions. Flavour: Mint.
**Orthoprint**: extra elastic, fast working alignate which is suitable for general practice. Its exceptional elastic properties make it suitable for use in orthodontics. Flavour: Vanilla.
**Neocollid**: alignate for high precision impressions with normal setting times. Flavour: Chocolatey.
**Phase plus**: chromatic alignate with a creamy consistency. Colour variations accompany each different preparation phase: violet during mixing, pink during working phase and positioning on the tray, white during the time in mouth while setting. Suitable in general clinical practice. The colour change associated with a pleasant flavour make it especially suitable for use in pedodontics. Flavour: Mango.

**Tropicalgim**: chromatic alignate to consistence cremosa. La variazione cromatica accompagna le differenti fasi di preparazione: violet pendant le mélange, rose pendant la phase de travail et de positionnement sur le porte-empainte, blanc pendant le temps de permanence dans la bouche jusqu'au durcissement. Indiqué pour une pratique clinique générale, notamment pour la création de modèles en cabinet. Aroma: Menthe.
**Topicalgim**: alignate chromatique à consistence élevée. La variation de couleur accompagne les différentes phases de préparation: rouge pendant le mélange, orange pendant les phases de travail et de positionnement sur le porte-empainte, jaune pendant le temps de permanence dans la bouche jusqu'au durcissement. Indiqué pour la pratique clinique générale. Le changement de la couleur associé à un arôme agréable le rendent particulièrement adapté à une utilisation en pédiatrie. Aroma: Mangue.

**DOSING AND MIXING**

Keep the bag (Fig. 1) and pour the alignate into an airtight container (Fig. 2). Keep the lot number and expiry date of the product by recording the relevant details off the bag. Shake 2 or 3 times to disperse the powder (Fig. 3) then proceed with the mixing. Using the dosing spoon, remove the powder without compressing it, levelling off or removing any excess alignate by passing a flat spatula over the top of the spoon (Fig. 4). Repeat the operation until the required quantity is reached.

Add 1/3 of a measure of water (18 ml) for every spoonful of powder (9 g). E.g. for 2 measures of powder (18 g), or one measure tray, add 2/3 of a measure of water (36 ml) (Fig. 5).

Close the container and store it at 5-27°C/41-80°F (Fig. 12).

Use the water to the powder and mix for the times specified in the table (Fig. 6).

Spread the material over the impression tray (Fig. 7) and insert into the mouth before the end of the working time (Fig. 8).

Wait for the material to harden until the end of the recommended time in mouth. In the case of coloured alignates, working time is easily recognised by the colour changes described previously.

For the best possible (homogeneous and bubble-free) mixing results, we recommend the use of ALGHAMIX II (Fig. 9).

Attendere l'indurimento del materiale osservando i tempi consigliati per la permanza nel cavo orale. Negli alignati cronici, i tempi di lavorazione sono facilmente riconoscibili da cambiamenti di colore, descritti in precedenza.

**TIMES FOR CLINICAL USE\***

Remitne a table 1 for times for clinical use (Table 1)

Line I: Mixing time (Mixing Time)
Line II: Working time (Working Time)
Line III: Time in mouth (Time in Mouth)
Line IV: Setting time (Setting Time)
Line V: Total working time (ISO 1563) (Total working time - ISO 1563)

\*Times for clinical use (see table 1, Material Characteristics) are indexed to the start of mixing with deionized water at 23/23°F. Cold water retards setting, warmer water speeds up setting. Variations in water hardness may result in variations in times. According to ADA 18-1563 specifications.

**WARNING:** In some subjects, vinyl polysiloxane may cause irritation or other allergic reactions.

**CLEANING AND DISINFECTION OF THE IMPRESSION**

When taking the impression, carefully rinse in order to remove any traces of saliva (Fig. 10), drain off the excess water and dry immediately. Ideal disinfection is achieved by immersing the impression in Zeta 7 solution or spraying it with Zeta 7 spray (Zhermack) (Fig. 11). When using other disinfectants, always follow the manufacturer's instructions.

**POURING THE IMPRESSION – RECOMMENDED DENTAL STONES**

We recommend that you pour the impression immediately using dental stones type 3 (Elite Model/Model Fast - Zhermack) or type 4 (Elite Rock - Zhermack) (Fig. 13).

**STORING THE IMPRESSION**

If the gypsum cannot be immediately pour, drain off the excess water and store the impression in a hermetically sealed bag (Zhermack Long Life Bag) at room temperature (23/23°F). Under these conditions the gypsum pouring can be deferred for up to 48 hr after the impression taking (Fig. 14).

**CONSERVAZIONE DELL'IMPRESSIONE**

Qualora non fosse possibile colare il gesso immediatamente, eliminare gli eccessi d'acqua e conservare l'impronta in una busta ermeticamente sigillata (Long Life Bag Zhermack) a temperatura ambiente (23/23°F). In queste condizioni la colata del gesso può essere differita fino a 48 ore dalla presa d'impronta (Fig. 14).

**IMPORTANT REMARKS:** Conserving errors on the use of our products, provided in any form, be that verbal, written or through demonstrations, are based upon the current state of dentistry and of our know-how. They are to be considered as non-binding information, also in relation to possible third party claims, and do not exonerate the user from personally checking the conformity of the products with the applicable regulations. The user is responsible for the possible compliance with the Company and therefore under the user's responsibility. **IMPORTANT REMARKS:** Conserving errors on the use of our products, provided in any form, be that verbal, written or through demonstrations, are based upon the current state of dentistry and of our know-how. They are to be considered as non-binding information, also in relation to possible third party claims, and do not exonerate the user from personally checking the conformity of the products with the applicable regulations. The user is responsible for the possible compliance with the Company and therefore under the user's responsibility. Possible liability for damages is limited to the value of goods supplied by the Company and therefore under the user's responsibility. Use eventually responsible liability of damages is limited to the value of the merchandise furnished by the firm and employed by the customer. The product content does not constitute a warranty against the risk of fire.

**CONSERVATION OF THE IMPRESSION**

Qualora non fosse possibile colare il gesso immediatamente, eliminare gli eccessi d'acqua e conservare l'impronta in una busta ermeticamente sigillata (Long Life Bag Zhermack) a temperatura ambiente (23/23°F). In queste condizioni la colata del gesso può essere differita fino a 48 ore dalla presa d'impronta (Fig. 14).
